

## PRESS RELEASE

### CHAMELEON INTRODUCE ADP

Chameleon Products Ltd, the specialists in decorative technology are pleased to announce a the introduction of its latest product “ADP”

ADP is an exciting and innovative technology that applies any image, pattern or effect onto aviation approved plastics such as Polycarbonate, ABS, PMMA, PSSU The process applies a vast range of images onto any flat substrate creating “A Decorative Panel” (ADP) by A Decorative Partner (ADP) this allows the product then to be vacuum formed into any 2D or 3D item by any manufacturing organisation. ADP can be supplied in sizes 1m x 1.6M and larger if required and up to 6mm thick.

ADP enables organisations to send to us their own material in flat sheets and we can apply any of our decorative patterns or any customised design onto it, if the material is already an approved aircraft material then after our decoration technology is applied have a good chance of complying with all relevant fire, smoke and toxicity tests and if required we can even apply a suitable lacquer or the customer can.

Applications for seat parts, bulkhead coverings, sidewall panels could all be potential uses for our technology and this is a superb addition to our existing technology which has been used by so many airlines and VIP customers and further enhances Chameleons position as the leader in all forms of decorative solutions and innovation to its customers,”

ADP basically says it all A Decorative Partner, A Decorative Panel, A Designed Part ” remarked Trevor Whetter, Chameleon Managing Director.

ADP can be seen at the Aircraft Interiors Expo in Hamburg in May on the Chameleon Products Stand.
