

PRESS RELEASE

CHAMELEON INTRODUCE VISIONAIRY

Chameleon Products Ltd, the specialists in decorative technology are pleased to announce a the introduction of its latest product “Visionairy”

Visionairy is an exciting and innovative technology that introduces 3D images into the Aviation Sector.

The process applies a vast range of images onto substrates creating 3 Dimensional scenes which can then be attached to Aircraft Bulkheads or other areas.

Visionairy images can be created in many sizes up to 1m x 2M and are enclosed in a frame that is aviation approved and passes all fire, smoke and toxicity requirements and are released with ETSO and EASA F1 release for immediate fitment.

“The potential of Visionairy is truly remarkable and we are still defining its overall uses, but effectively airlines can have 3D images positioned in various areas of their aircraft creating their very own art gallery in the sky with interesting images which will captivate their passengers” remarked Trevor Whetter, Chameleon Managing Director.

“The technology allows us to create images of anything and whilst the initial set up is time consuming and demanding once we have created the image we can recreate it many times over and quickly “

Visionairy can be seen at the Aircraft Interiors Expo in Hamburg in May on the Chameleon Products Stand.
